

## Accelerate Your Supply Chain Success

Identifying issues that keep you from successfully meeting your business objectives is challenging enough ... finding ways to resolve them can be even more difficult.

DSI has the experience and expertise to help you evaluate your current Supply Chain environment and put together a comprehensive solution architecture to meet your business objectives.

### 20 Years' Experience in AIDC Solutions

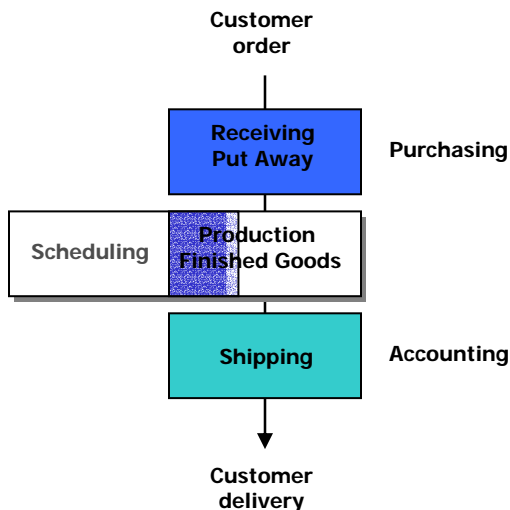

DSI can provide knowledge into the AIDC industry best practices, as well as a vision for your future state based on your unique situation and longer term goals.

Our goal is to make a significant, measurable, and positive impact on the way your business runs by looking for opportunities to eliminate redundant or extraneous steps and by synchronizing tasks.

Efficient processes, the right technology for the job at hand, and the understanding that people are your most valuable resource is the discovery framework we use to get started.

#### **GT Development - Jim Meyerdirk, VP Business Development**

*DSI provided a comprehensive analysis of our existing business processes, from customer service, sales and accounting to receiving, put-away, production, and shipping. They not only provided recommendations on what technology and software would best serve our bar code system needs but uncovered several areas to improve our current practices, from subtle to significant. Without this insight we would have missed opportunities that will have great benefit on today's business and position us well for our future.*

#### Discovery Assessment Deliverables

- Discovery Assessment document
  - Executive summary
  - Business-level process analysis
